

Domination graph examples

Projective example

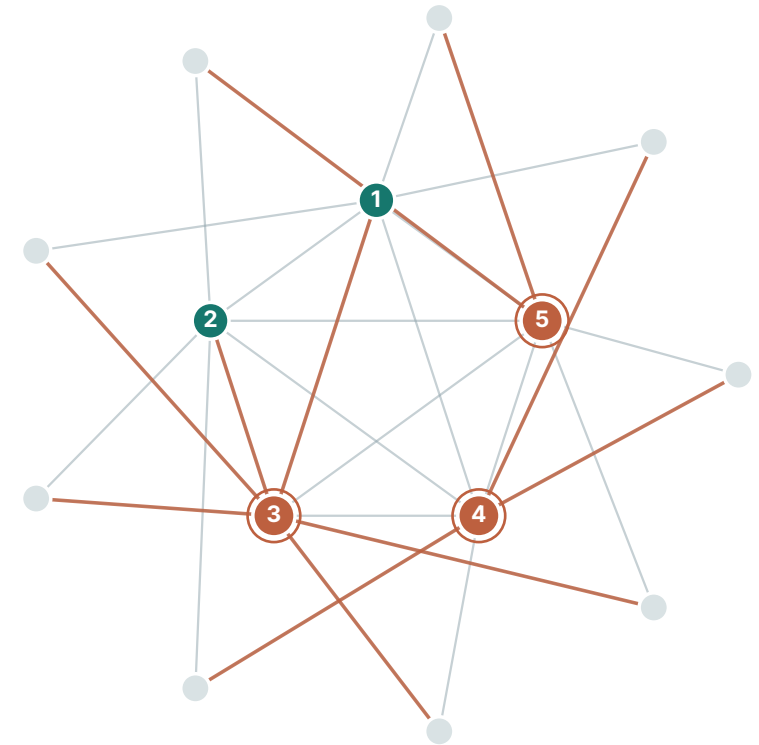

182 vertices · 889 edges · $q = 2$, $w = 1$

● Left controls · 14 ● Right controls · 21 ● Clones · 147

Dominating set {3, 4, 5}

14 vertices · 28 edges

Orange edges connect each remaining vertex to one of the selected vertices.

The 14-vertex graph is unimodal. The 182-vertex graph's coefficients have not been computed.
